

A-RAD maintenance ticket - unit 65, cycle 357

DIAGNOSIS (retrospective agent)

severity 2 - action: continue monitoring - matched: Similarity=0.919

diagnosis

The monitored unit's anomaly progression matches the precedent history of u232c217, indicating a recurring pattern of unusual airflow management. The current anomaly at cycle 357 is characterized by an imbalance in the engine's airflow management pattern, suggesting an operational deviation or malfunction in the engine's core or fan system.

rationale

Grounded in rule sensors and progression

PROGNOSIS (forward agent)

RUL estimate 20 cycles - outlook accelerating - confidence low

progression narrative

The unit's anomaly progression matches the precedent history of u232c217, indicating a recurring pattern of unusual airflow management. The current anomaly at cycle 357 is characterized by an imbalance in the engine's airflow management pattern, suggesting an operational deviation or malfunction in the engine's core or fan system.

cited precedent futures

u232c217 survived 25 more cycles

verifier: 0 repair(s), clean | CNN-GRU hint 0, ground truth 21 cycles | 121 + generation tokens, 26 s total on edge-class hardware
