

A-RAD maintenance ticket (high-confidence prognosis) - unit 245, cycle 260

DIAGNOSIS (retrospective agent)

severity 2 - action: schedule inspection

diagnosis

The monitored unit's anomaly progression matches the precedent cases with a high degree of similarity, indicating a recurring pattern of imbalance in the cooling system and excessive core operation. This suggests that the current anomaly is likely caused by an operational deviation or malfunction in the cooling system.

PROGNOSIS (forward agent)

RUL estimate 22 cycles (range 21-23) - outlook accelerating - confidence HIGH

progression narrative

The unit's anomaly progression matches the precedent cases with a high degree of similarity, indicating a recurring pattern of imbalance in the cooling system and excessive core operation. This suggests that the current anomaly is likely caused by an operational deviation or malfunction in the cooling system.
